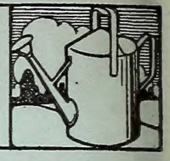
THE HOME GARDENER'S TIME TABLE



Cultural directions telling how to plant will be found at the heading of each class of vegetables throughout this Catalog, as well as being printed on every package of Maule's Seeds. The table below tells what to plant at certain periods to get the best results.

January 1—February 25

The Maule Seed Book is distributed in January. Look it over carefully and make up your seed order. Include at least a few varieties you have never grown before. An early order for Maule's Seeds will assure you of getting everything wanted, and you will be ready to plant when conditions are most favorable.

If you want to raise strong, healthy plants for transplanting outside in the spring, this is the time to prepare your hotbed or cold frame. Instructions for this are given below.

Follow the practical instructions given in The Maule Seed Book. Success in your gardening efforts will thus be insured.

February 25—March 30

Sow in greenhouse, hotbed or indoors in shallow boxes or pots, seeds of Artichoke, Broccoli, Brussels Sprouts, Early Cabbage, Cauliflower, Celeriac, Celery, Egg Plants, Ground Cherry, Lettuce, Peppers, Tobacco, and Tomatoes.

After March 15, or as soon as the ground can be worked, plant Asparagus seed or roots, Beets, Carrots, Cress, Dandelion, Horse Radish Sets, Leek, Lettuce, Mustard, Onion Sets or seed, Smooth Peas, Potatoes, Radishes, Rhubarb Roots and Spinach.

Asparagus beds may now be top-dressed with stable manure and given an application of salt.

April 1—May 10

As soon as all possible danger of frost is past, plants of Artichoke, Broccoli, Brussels Sprouts, Early Cabbage, Cauliflower and Lettuce may be set outdoors.

As a protection for early plants against frost, rain, wind and insects, we can highly recommend the use of Hotkaps. They are offered on page 53.

Plant Asparagus Seed or roots, Bush Beans, Beets, Brussels Sprouts, Carrots, Celeriac, Celery, Chicory, Collards, Corn Salad, Early Corn, Cress, Dandelion, Endive, Garlic Sets, Herbs, Horse Radish Sets, Kale, Kohl Rabi, Leek, Lettuce, Mustard, Onion seed or sets, Parsley, Parsnips, Peas, Potatoes, Radishes, Rhubarb seed or roots, Salsify, Sorrel, Spinach, Swiss Chard and Early Turnips.

May 10—June 15

If not yet set out in the open ground, re-set or transplant Egg Plants, Ground Cherry, Peppers, Tobacco and Tomato plants, as well as Broccoli, Brussels Sprouts, Early Cabbage, Cauliflower and Lettuce plants.

Plant in the open: Asparagus roots, Beans of all kinds, Lima Beans, Beets, Broccoli, Brussels Sprouts, Late Cabbage, Carrots, Cauliflower, Chicory, Collards, Corn Salad, Corn, Cress, Cucumbers, Dandelion, Garlic Sets, Herbs, Horse Radish Sets, Kale, Kohl Rabi, Leek, Lettuce, Mangels, Muskmelons, Mustard, Okra, Onion seed or sets, Parsley, Parsnip, Peanuts, Peas, Potatoes, Pumpkins, Radishes, Rhubarb seed or roots, Salsify, Sorrel, Spinach, Sunflower, Squash, Swiss Chard, Early Turnips and Watermelons.

June 15—July 20

Sow outdoors: Bush Beans, Bush Limas, Beets, Carrots, Chicory, Collards, Corn, Cress, Cucumbers, Endive, Kale, Kohl Rabi, Lettuce, Okra, White Welsh Onion, Potatoes, Summer and Winter Radishes, Rutabaga, Sorrel and Swiss Chard.

Set out plants of Broccoli, Brussels Sprouts, Late Cabbage, Cauliflower, Celeriac and Celery.

July 20—August 31

At this time many of the vegetables that were planted early have matured and should be followed by others, but the probable time of the first frost in each locality must be considered before deciding what to plant.

Sow the following for a late fall crop: Bush Beans, Chinese Cabbage, Collards, Kale, Lettuce, Mustard, Early Peas, all Radishes, Spinach and Turnips.

September 1—October 15

Sow no later than September 15: Corn Salad, Kale, Lettuce and Spinach for late fall or early spring use. Celery plants should be slightly banked up.

Any of these vegetables wanted for early spring use should be covered with a few inches of hay, leaves or litter the last of November and left on during the winter.

Until October 15: Asparagus roots, Horse Radish Sets, Onion Sets and Rhubarb roots may be planted. These require no protection, but a covering will prove beneficial.

October 15—December 31

Continue banking up Celery plants. After a few light frosts, when the ground is dry, dig roots of Beets, Carrots, Celeriac, Parsnips, Winter Radishes, Rutabaga, Salsify and Turnips; remove tops all but an inch or two which will prevent bleeding or drying out. Store either in pit outdoors or in boxes indoors, covering roots with dry sand or soil.

Store Cabbage outdoors by placing heads close together, roots up, and cover with straw and soil.

Important Note: The cultural suggestions are based on climatic conditions in the latitude of Philadelphia. Farther south, allow one week to two months earlier. Farther north, allow one to four weeks later, according to the climatic conditions where you live.

The Care of Your Soil

Heavy clay should be mixed with sifted coal ashes or sand. Sandy soil should be mixed with coarse manure. On all soils a wheelbarrow load of manure to every two square yards of ground will be enough.

When stable manure is not obtainable, the use of commercial fertilizers, such as Vigoro or Pulverized Sheep Manure (page 53) will prove highly productive.

If your garden is large it should be plowed; if small, it may be dug. The soil should be worked to a depth of 6 to 8 inches. An application of fertilizer or Sheep Manure may be spread on this plowed or dug ground and harrowed or raked in. The ground is now ready for planting. Sow seeds as suggested on the seed bags.

Cultivation is necessary between the plants in a row as well as between the rows themselves. If you will do this thoroughly and often, your soil will get all the air and moisture it needs, and you will keep down the weeds at the same time.

How to Make a Hotbed or Cold Frame

Select a southern or southeastern exposure. Make a box-like frame of heavy lumber, as wide and as long as desired, the back of the frame being 12 in. high and the front 8 in. high. Dig a pit about 1½ ft. deep, fill with fresh stable manure. Pack manure down firmly until it is level with surrounding earth. On top of this manure put rich, light and well-sifted soil to a depth of 4 in. Cover the frame with glass sashes; the manure will generate heat. In a few days the heat will have reached its highest point and start to drop. When it has fallen to 80 or 90 degrees, seeds may be sown.

It is not necessary to ventilate the bed until the seed comes up, when air should be given on every bright day by raising the sash slightly at the back. Coverings of old carpet, salt hay or boards should be used at night to protect against danger of the cold. On bright, sunny days, before noon, water should be given the plants. Give enough ventilation to dry up any moisture that might be on or around plants. Water very sparingly during wet or cloudy weather to prevent mildew.

The cold frame is used for hardening plants started in the hotbed. It is built like a hotbed, but without the pit or manure, the frame resting on the surface of the ground. In mild climates, seed may be started in a cold frame instead of a hotbed.

Brussels Sprouts

108 Danish Prize (125 days)

Compact, Miniature Cabbages Closely Set Along the Stem

Brussels Sprouts is a delicious vegetable belonging to the Cabbage family, but more delicate in flavor and superior in quality. It should be more generally grown in home gardens to supply fresh sprouts in the late fall and winter. The plants grow medium tall producing an abundance of large, solid, dark green, tightly folded sprouts of choice quality. Grow in moderately rich soil to avoid an excess of leaves. Sow the seed in April or May in the open ground. Transplant in rows 3 feet apart and 18 inches apart in the row. When the sprouts begin to form at the base of the stalk, break off the lower leaves to give them room for growth. The plants are quite hardy, and are allowed to remain in the garden until after frost as the flavor of the sprouts is greatly improved by frost. One packet produces about 300 plants; one ounce 3000 plants; 4 to 6 ounces for an acre.

Pkt. 10c; oz. 20c; ¼ lb. 60c; ½ lb. 90c; lb. $1.60.

Asparagus

Culture: Sow seed in early spring in drills 2 to 3 feet apart spacing the seed 1 inch apart in the row, and firmly cover 1 to 2 inches deep. As soon as the young plants appear, begin shallow culture and keep free from weeds at all times. A packet will produce about 200 plants; one ounce about 750 plants; 4 to 5 lbs. are needed to sow an acre.

When one to two years old, transplant 18 to 24 inches apart in rows 4 to 6 feet apart which requires 5,000 to 7,000 plants an acre. In the home garden, plants may also be set 18 to 24 inches apart in rows 2½ feet apart. 100 plants are sufficient for the average family.

4 Mary Washington Rust-Resistant

Newest Creation in Asparagus

This remarkable asparagus has replaced all other varieties because it is practically free from rust and other diseases, yet it produces larger, thicker, and more uniform shoots of attractive dark green color.

The tips or buds grow straight and tightly folded, and do not branch until well beyond market height. It makes a clean, vigorous growth and produces the finest green asparagus for home use or market. Our strain of this foremost asparagus is unexcelled in every way.

Pkt. 10c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; lb. 85c; 2 lbs. $1.50; 5 lbs. $3.50.

69B56 One-year-old Asparagus Roots

Mary Washington, Rust-Resistant. Highly recommended where high yield and permanency are the main object.

2 Green Globe

The standard variety grown extensively for its buds or flower heads which are a choice delicacy. Seed may be sown indoors, setting the plants outdoors after danger of frost is past, in rows 2 by 4 feet apart. The plants are hardy, but require winter protection in colder sections. Pkt. 15c; ½ oz. 25c; oz. 40c; ¼ lb. $1.20; ½ lb. $2.20; lb. $4.00.

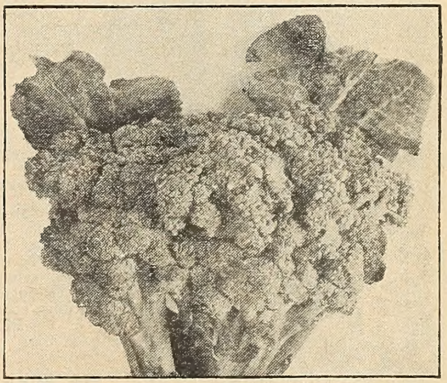
Broccoli

103 St. Valentine (150 days)

Also Known as Winter Cauliflower

This is the white heading type of Broccoli grown in the Northwest for shipment to the eastern markets. It can hardly be distinguished from Cauliflower, and is more hardy, but requires much more time to mature. Very productive and of choice quality. In sections where Cauliflower grows well, we advise planting Cauliflower only.

Pkt. 10c; ½ oz. 25c; oz. 40c; ¼ lb. $1.20; ½ lb. $2.20; lb. $4.00.



105 Calabrese Broccoli

105 Calabrese (90 days) ✤

Sow 2 lbs. per acre.

Pkt. 10c; oz. 15c; ¼ lb. 40c; ½ lb. 60c; lb. 95c.

Maule's Green-Podded Bush Beans

Space the seed 2 to 3 inches apart in the row. Cover 1½ to 2 inches deep. For a succession of tender pods, plant every 2 weeks until 10 weeks before the first autumn frost. Beans are more delicious and bear longer when picked before fully matured. Give frequent and shallow cultivation to conserve soil moisture. Pole Baby Lima or Butter Bean of the South

Grows quickly, matures early, and is immensely productive. It is particularly adapted for planting in the South; and it does equally well in the North, especially in sections where early frosts will not permit other Lima Beans to mature a crop. The green shell beans are small, flat, and of splendid quality.

Bush Lima Beans

Culture: Lima Beans grow best on rich, well-drained, porous soil. Do not plant until danger of frost is over, the soil warm and moderately dry, and the nights quite warm, as Lima Beans are a tender vegetable. In most sections, Limas are planted about 2 weeks after the first planting of bush or snap beans. Plant in drills 2½ to 3 feet apart, spacing the seed 6 to 8 inches apart, and plant them edgewise with the eye downward. Cover 2 inches deep. Later thin to stand 16 to 18 inches apart in the rows. Cultivate shallow and frequently until the plants blossom. Pick the pods as soon as the beans are of edible size which, depending upon the variety, will be ready for picking 65 to 85 days after planting. One packet will plant 25 feet of row; one lb. 150 feet; 45 to 60 lbs. an acre.

Early Maturing; Heavy Yielder; Firm, Sweet Dark Red Flesh

No other Beet can replace this well established variety for earliness. Under favorable conditions the roots grow quickly and reach full size in an astonishingly short time. A favorite with market growers who plant it extensively for forcing to supply the early market. As the roots are of medium size and have only a limited amount of foliage, they can stand quite close planting, which, in turn, means increased yields from the land available. The compactness of the plant is only one of the features that has made it valuable for growing under glass. Its quality, attractiveness, uniformity, and the dark red color of the flesh are characteristics that will appeal to many gardeners. Cooks sweet, tender, and crisp, retaining its bright red color nicely and is very desirable for pickling.

70 MAULE'S EARLY WONDER (55 days) ✤

Also Known as Boston Crosby. Early, Tender and Sweet

This early Beet is the result of yearly selection made over a long period of time. As we offer it today it seems almost impossible to still further improve its appearance and excellent quality. It is probably the earliest of the small table beets for outside growing. The roots are flat to globe in shape, of a beautiful deep red color, and of medium size roots and tops. This characteristic makes it possible to grow them quite close and thereby increase the yield. Its most valuable points are—that it is as early as any other market Beet, and that the roots mature all together; thus allowing the harvesting of the entire crop at one time. Equally desirable for home garden planting as for market.

Blood-Red Flesh with Few Zones. Excellent for Canning

While this variety has been improved principally for the purpose of canning, it nevertheless represents a most valuable variety for home gardeners and market growers who cater to a select market. The shape of the Beets is round or slightly flattened. The foliage is reddish green and somewhat smaller than that of Detroit Dark Red. The very dark red skin is exceptionally smooth. The color of the flesh is the darkest of any of this type, showing hardly any zones at all. This is a Beet that will remain tender and sweet all summer and well into the late fall. Whether young or old, small or large, they are always tender and sweet.

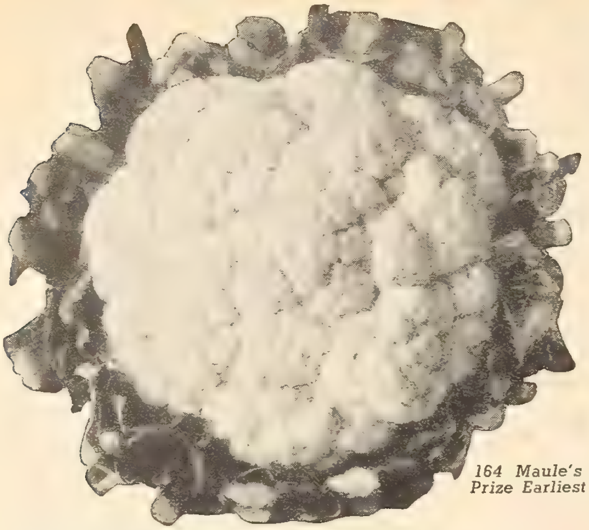
Maule's Quality Cauliflower



164 Maule's Prize Earliest

Culture: For extra early Cauliflower start the seed of the early, quick maturing varieties in the fall in a cold frame or in early spring in a hot-bed. When large enough, transplant to the garden or field. For a main crop to harvest during summer and autumn, sow the seed in May or early June. When transplanting, set the plants 2 to 3 ft. apart each way. One packet will produce about 150 plants, one ounce about 3,000 plants. Four ounces are required for one acre.

164 Maule's Prize Earliest (90 days) ✱

Extra Early, the Largest, and Surest Header

We consider this extra early strain the finest, largest, and most attractive cauliflower. Every plant produces a head. It is a sure header whether planted for forcing in frames or grown outdoors for either early or late crop. The heads mature all at about the same time. The growth of the plants is dwarf and compact so that the plants can be set as close as 18 in. apart in the frame or field. Such close planting naturally means a greatly increased yield from a given space of ground. It is particularly desirable for forcing under glass. The compact, perfectly white, closely formed heads are most attractive and are sure to bring a high price in the market. No one who has had experience with Maule's Prize Earliest is likely to grow any other for the early market. When the seed is sown under glass in February and transplanted after danger of frost is over, perfect heads are produced in the early days of June.

Maule's Blue Ribbon Celery

Culture: Sow the seed thinly any time from March 1 on, in either boxes, cold frames, or in a specially prepared bed. Cover thinly but firmly with fine soil. Keep evenly and moderately moist until the seeds sprout. One packet of seed will provide about 400 plants; one oz. will give 7,500 plants. Four ounces of seed are needed for an acre. Keep the plants growing vigorously at all times, and transplant in rows spaced 4 ft. apart allowing about 6 in. between the plants in the row. For a late fall crop and winter storing sow the seed in the open early in the spring when the ground can be prepared. Celery requires ample animal fertilizer and humus, and moisture for good growth. It does best on muck soil due to its moisture retentive quality.

Maule's Yellow Sweet Corn

Culture: Plant the seed after all danger of frost is over and the ground has warmed up. Plant in rows 3 to 4 feet apart. Cover the seed about one inch deep. Space the seed 8 inches apart in the rows. The most popular method, however, for field planting is to drop 3 to 4 seeds in hills spaced either 3 by 4 feet or 4 by 4 feet. Allow 2 to 3 plants to remain in each hill. In order to provide a continuous supply of good fresh corn, make succession plantings until about July 10. The final date of planting, of course, depends entirely upon your climatic condition. A packet of seed will plant four rows, each 25 feet long; use ½ lb. for 200 hills; 12½ lbs. per acre.

Most plants produce two perfectly-formed large ears about 6½ to 7 in. in length. There are 10 to 12 rows of bright yellow, sweet grains to the ear.

We Claim That This is the Finest Large-Eared Sugar Corn In Existence

When a variety of Sweet Corn not only holds its own for a period of over 23 years but its sales increase with every season, it simply must be good. While its days to mature have been given above as 88, we know of many instances where it has produced its first ears within 78 to 80 days after planting. Quality in Sweet Corn is, however, more important for its popularity than season of maturity. The ears are 7 to 9 in. long and frequently 2 to 3 in. thick, with 12 or 14 rows of large sweet kernels that fairly melt in your mouth. The stalks are 6 to 7 ft. tall, many of them carrying 2 to 3 ears on a stalk.

Long and Slender White Grains of Unusual Nectar-Like Sweetness, Fairly Melting in the Mouth

This variety is easily recognized by the irregular arrangement of the kernels. The seeds also are quite distinct. The ears are quite large, 7 to 8 in. long, with a small white cob thickly covered with long, slender, white grains of exceptional sweetness, and it remains "in the milk" longer than any other Sweet Corn. Country Gentleman has become famous all over the United States for its nectar-like sweetness; and is the joy of epicures everywhere. The stalks grow 7 ft., often carry as many as three ears which makes this variety a heavy yielder. Splendid for home, market, and canning. It is rather slow in maturing, but is in perfection just after the early varieties.

We do not recommend it for forcing purposes.

629 Giant Summer Straightneck (60 days) ❋

A Straightneck Strain of Golden Summer Crookneck

Much in demand during the past few years by market growers, as they pack so nicely for shipment in either hampers or crates, because of the straight neck. They always arrive at the market in good condition, and with no "broken necks" as is often the case with the Crookneck variety, its parent. Another good point which will commend "Straightneck" to all housewives is that it is so much easier to prepare for cooking. The flesh is salmon yellow, and is so tasty when cooked that everybody asks for more. The outside coloring and warting are the same as in the parent variety. We recommend that all our friends grow "Straightneck" this year.

As Early as Earliana. Smooth and of Superb Quality

A new tomato developed by Dr. Myers of Penn State College. Of the self topping type, the vines produce short thick stems and rather coarse, medium dark green foliage. The medium-sized, scarlet-red fruits are borne in clusters of 4 to 6 on the entire plant and are smooth, slightly flattened and solid, with small seed cavities. Of superb quality and exceedingly desirable for both market and home use Be sure to include it in your order.

682 GIANT PONDEROSA TOMATO (115 days) ☘

Magnificent in Size, Delicious in Flavor, Almost Seedless

Although essentially a home garden Tomato, and not suitable for shipping, many owners of roadside stands have, within the last few years, found that Ponderosa meets with a ready sale when offered. In some sections the sales have been quite heavy, no doubt on account of its gigantic size, and when eaten, for its mild and delicious sub-acid flavor which is preferred by many people. Although introduced to cultivation over 40 years ago, this most attractive purplish-pink colored Tomato is still very popular and in great demand. Each successive season sees thousands of new converts to Ponderosa. Its vigorous vines undoubtedly produce the most gigantic Tomatoes ever known, and in great profusion if the soil is not too rich. Low Growing Evergreen Grass for the Yard or Lawn

This mixture is the result of years of experiment and study, and is unsurpassed for producing a velvety green deep-rooted sod that will be permanent and present a good appearance spring, summer and fall. It is made up of grasses that are at their best at different periods and thus a lasting and permanent effect is obtained. It is entirely free from grasses that form clumps. A small proportion of White Dutch Clover has been included in the mixture because it thickens the sod and grows well with the finer grasses.

884 "Quick Results" Lawn Grass Seed Mixture

A Rapid Growing, Velvety Grass

We recommend this mixture to all gardeners who want a beautiful effect in the shortest time possible. Besides the grasses which are suited for this purpose, we have included enough seed of others to insure permanent results. You may expect to cut your lawn for the first time about 2 weeks earlier from this than from any other grass seed mixture. It is particularly adapted for late spring and summer sowing.

797 White Dutch Clover

The True Lawn Clover. Quick and Low Growing

Gardeners who prefer an extra-heavy growth of clover in their lawn should add this at the rate of 4 ounces to every 2 pounds of grass seed. Sow separately in order to effect an even distribution as clover seed is much heavier than grass seed.

885 Maule's "Shady Lawn" Grass Seed Mixture

Flourishes Under Trees or in Shady Nooks

Nothing spoils the good effect of a lawn more than bare spots in shaded corners, or under trees. Using this grass mixture will help you to do away with these unsightly spots as the grasses in this mixture are naturally adapted for growing in semi-shaded positions. Proper preparation of the soil, an ample supply of plant food, and regular watering may be needed if rain does not reach the shaded spots in abundance.

887 Maule's "Sunny South" Lawn Grass Seed Mixture

Especially Suited to Hot Climates

The "Sunny South" mixture is adapted to our southern states where the ordinary lawn grass mixtures will not succeed sufficiently well to provide an even, smooth, rich green lawn. It contains southern grasses, including 10% Bermuda Grass, that will give a good sod even during the hot summer weather provided the lawn is watered liberally.

886 Maule's "Steep Slope" Lawn Grass Seed Mixture

Especially Adapted for Embankments and Terraces

This mixture is made up of grasses that are deep rooting to hold soil in place on slopes, embankments, etc. It contains only typical lawn grasses which have long, spreading root growth and will withstand considerable heat and dry weather. To prevent washing after the seed is sown, cover the bank with burlap or cloth until the young seedlings have taken hold of the soil.

With its many and varied forms, its wide range of color, and its real beauty, the Aster is deservedly one of the most popular flowers we have. By planting early, midseason and late varieties you may have Asters in bloom from June to frost.

W. R. means **Wilt-Resistant**—Resistant to the destructive Wilt disease. We offer all that have been bred so far, and will add more as they are developed. Asters bloom from three to five months after seed is sown, varying with the variety and the climate. By starting the seed indoors, 6 weeks before outdoor planting time, earlier blooms may be had. Give your Asters rich, well-drained soil, plenty of moisture and sunshine, and they will repay you. The location of the Aster bed should be changed every year.

Trimardeau or Giant Bedding

Excellent Pansies for bedding and edging where separate colors or color combinations are desired. Plants are compact, quite hardy, and neat habit of growth. Flowers are of good size and borne on strong, stiff stems which are long enough for cutting.

1623 Golden Yellow Pure golden yellow. Pretty with other colors.

1596 Imperial Blue Vivid ultramarine-blue with a large blotch of deeper blue marking on the three lower petals.

1634 Extra Fine Bedding

Mixed Colors A very good mixture of fine Pansies. Blooms are of good size and the mixture has been made from many separate colors to assure its being especially brilliant. Maule customers know that for bedding, where mass of bloom is desired, this is a splendid mixture to plant. It is showy and provides many cut flowers. **Pkt. 10c; ⅛ oz. 30c; ¼ oz. 50c.**

1610 Improved Swiss Giants Mixed

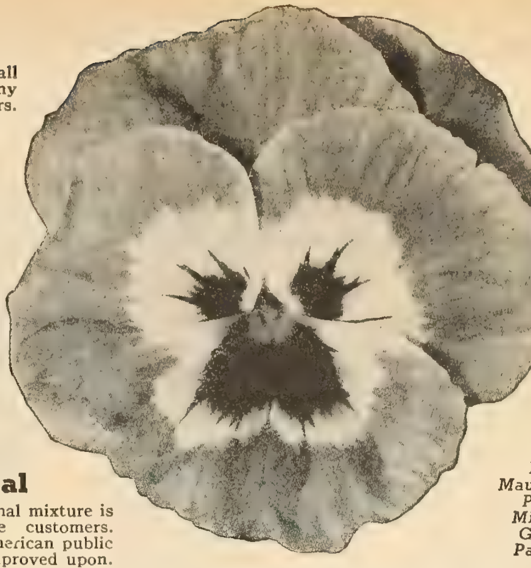
When first offered a few years ago these richly colored Pansies created a sensation, but today they are even lovelier from constant selection and careful breeding. The blooms are extremely large. They are quite round, and crinkled and fluted in the most artistic manner. The colors have special depth and richness, and there is a predominance of rich red and many unusual shades. The flowers are marked with blotches of deeper contrasting color. **Pkt. 25c; 1/16 oz. 60c; ⅛ oz. $1.00.**

1600 Giant Phenomenal

Mixed Colors Again this Phenomenal mixture is cordially recommended to Maule customers. Though it was introduced to the American public years ago, it has been constantly improved upon. Originating in France, this mixture consists of the largest, choicest, and most "phenomenal" of Pansies. It is especially rich in Pansies of the ruffled type, and there are many and varied colors and color combinations. The presence of many Pansies of those wine-red shades so rare among flowers has endeared it to many Maule customers. Every order should include it. **Pkt. 15c; 1/16 oz. 35c; ⅛ oz. 65c.**

1594 Oregon Giants

Superfine Mixture Especially grown for us in Oregon; flowers are of the largest size—well-grown flowers measuring 4 in. across. A gracefully waved edge adds to the charm of these giant flowers, which otherwise are more flattened than other Pansies. Quite as fine a characteristic as the size of these Pansies, is their extra-long stems. Those planning to grow Pansies for market might well select this, for the flowers from them are of unrivalled size, sure to attract customers and warrant asking a higher price for the plants. Colors range from white to richest purple. **Pkt. 35c; 1/16 oz. $1.00; ⅛ oz. $1.75.**



1614 Maule's Prize Mixed Giant Pansy

It exhibits the greatest diversity of colors, in the most beautiful soft and deep rich shades. There are the finest self-colors including white, yellow, pink, rose, blue, purple and the rare and desirable red shades. Some of the Pansies are veined and bordered with contrasting colors, while others have clearly defined mahogany-brown, black or purple eyes. Some are wide and flaring, while others are attractively waved. They are large, 3 in. and more across, of perfect form, heavy substance, and very long-stemmed. **Pkt. 25c; 1/16 oz. 80c; ⅛ oz. $1.50.**

For color in the garden, or grown commercially by florists in greenhouses during the winter, or as cut flowers, Snapdragons (botanically Antirrhinum) have been universal favorites for years. The introduction of new and varied types has made them more popular than ever. All are easily grown in ordinary, well-drained garden soil in either full sun or semi-shade. Flowers are freely produced for several months and until frost where conditions are favorable. For earliest blooms, sow seed indoors about six weeks before your regular outdoor planting time; for later flowers sow seed outdoors in the spring when soil has become quite warm.

The tallest spikes and the largest flowers. Plants grow 2 to 3 ft. tall outdoors and very much taller, depending on culture, in the greenhouse. Fine for beds and borders, and invaluable for cutting.
